Double Glazed Polar

The double glazed version of Polar uses no silicone even at glass-to-glass joints. Shared support to both panes of glass is offered by the unique 'ghost post' which means that the system is totally re-locatable should future needs dictate.

The slim aluminium framework may be coloured to choice to match the surrounding decor whilst the door frame accepts either full height glass or veneer doors.

Venetian blinds are readily accommodated within the glazing cavity and are operated by a small round knob control located at the 'mock silicone' joint.

Enhanced sound performance is a definite advantage of Double Glazed Polar which achieves a rating of **42dB (Rw)**.

Both Single and Double Glazed Polar are aesthetically compatible and may be used in combination on a project to satisfy varying performance needs.
